TRAINING

PROFESSIONAL TRAINING PROGRAMME

AI-Enabled Performance Management and Employee Appraisal

Ten-day instructor-led programme

A practical, evidence-based programme on how to design, implement and improve objective, consistent performance management and employee appraisal systems, and how to integrate artificial intelligence responsibly throughout the performance management cycle.

DURATION 10 days	TRAINING HOURS 08:30–16:00 daily	FORMAT Instructor-led practical & workshop-based
DELIVERY Classroom online or in-house	FEE USD 2,500 per delegate	CERTIFICATE Certificate of Attendance

OVERVIEW

Course introduction

Performance management and employee appraisal play a critical role in aligning individual performance with organisational objectives. However, many appraisal systems are undermined by subjectivity, inconsistent rating criteria, personal bias, inadequate performance evidence and differences in how managers evaluate employees.

This comprehensive 10-day practical training programme equips participants with the knowledge, tools and practical skills required to design, implement and improve objective, consistent and evidence-based performance management and employee appraisal systems.

The programme also explores how artificial intelligence (AI) can be responsibly integrated throughout the performance management cycle. Participants learn how AI can support objective and KPI development, performance evidence analysis, competency assessment, appraisal preparation, employee feedback, identification of performance trends, development planning and performance improvement.

Guiding principle. AI should support rather than replace managerial judgement. Participants therefore examine responsible AI use, bias, confidentiality, employee data privacy, transparency, accuracy and the importance of appropriate human oversight.

OBJECTIVES**Course objectives**

By the end of this ten-day programme, participants will be able to:

- Understand the principles of effective performance management and employee appraisal.
- Design and manage an effective performance management cycle.
- Align employee objectives with departmental and organisational goals.
- Develop SMART objectives, measurable KPIs, targets and performance standards.
- Establish competency-based assessment criteria and behavioural indicators.
- Identify and reduce subjectivity and bias in employee assessments.
- Apply evidence-based approaches to employee performance evaluation.
- Design fair and consistent employee rating systems.
- Conduct effective employee appraisal and performance-review discussions.
- Provide constructive, evidence-based performance feedback.
- Conduct performance calibration and moderation exercises.
- Understand practical applications of AI in performance management.
- Use AI to structure and analyse employee performance information.
- Develop effective AI prompts for performance management and appraisal activities.
- Use AI to identify performance trends, inconsistencies, gaps and missing evidence.
- Use AI to support appraisal documentation and performance feedback.
- Develop AI-assisted employee development and performance improvement plans.
- Understand the risks and limitations of AI-supported employee assessment.
- Address confidentiality, privacy, fairness, transparency and responsible-AI considerations.
- Apply appropriate human oversight to AI-supported performance decisions.
- Develop an AI-enabled performance management and appraisal framework.
- Prepare a practical implementation roadmap for their organisation.

AUDIENCE**Who should attend**

This programme is suitable for professionals involved in employee assessment and performance management, including:

- HR managers and HR business partners
- Human resources officers
- Performance management specialists
- Talent management professionals
- HR analysts
- People analytics professionals
- Learning and development managers
- Department heads
- Line managers and supervisors
- Team leaders
- Senior managers involved in employee assessment

PROGRAMME

Detailed ten-day agenda

DAY 1 Foundations of Performance Management and Employee Appraisal

Participants examine the purpose and principles of performance management and establish the foundation for an effective appraisal system.

Topics. What the day covers

- Performance management versus employee appraisal
- The performance management cycle
- Strategic purpose of performance management
- Organisational, departmental and individual performance
- Roles of HR, managers and employees
- Characteristics of effective appraisal systems
- Traditional versus continuous performance management
- Common weaknesses in appraisal systems
- Creating a performance-oriented culture

Practical exercise. Review a sample performance management system and identify weaknesses, risks and opportunities for improvement.

DAY 2 Setting Performance Objectives, KPIs and Targets

Participants learn how to translate organisational objectives into clear and measurable individual performance expectations.

Topics. What the day covers

- SMART objectives
- Linking employee objectives to organisational goals
- Developing effective KPIs
- Quantitative and qualitative indicators
- Leading and lagging indicators
- Establishing targets and thresholds
- Weighting KPIs
- Performance standards
- Competency-based assessment
- Behavioural indicators
- Designing effective rating criteria

Practical exercise. Develop objectives, KPIs, targets and performance criteria for selected employee roles.

DAY 3 Evidence-Based Performance Assessment and Measurement

This day focuses on replacing subjective judgement with structured, evidence-based assessment.

Topics. What the day covers

- Subjective versus objective assessment
- Defining performance evidence
- Sources of performance information
- Collecting and documenting evidence
- Evidence quality and reliability
- Evaluating quantitative and qualitative performance
- Comparing results against KPIs and targets
- Documenting achievements and underperformance
- Maintaining performance records

Practical exercise. Analyse an employee performance file and determine whether the proposed ratings are adequately supported by evidence.

DAY 4 Reducing Bias and Improving Rating Consistency

Participants explore common sources of bias and inconsistency in appraisal decisions, including the halo and horns effect, recency bias, leniency, severity, central tendency, similarity bias and personal-preference bias.

Topics. What the day covers

- Conscious and unconscious bias
- Subjective assessment
- Inconsistent interpretation of criteria
- Manager rating patterns
- Evidence-based decision-making
- Rating calibration
- Moderation meetings
- Challenging unsupported ratings
- Improving consistency between departments
- Fairness
- Documenting rating decisions

Practical exercise. Participants independently rate the same employee case study, then conduct a simulated calibration meeting.

DAY 5 Conducting Effective Employee Appraisals

Participants develop the practical communication and management skills required to conduct professional appraisal discussions.

Topics. What the day covers

- Preparing for an appraisal
- Employee self-assessment
- Manager assessment
- Structuring appraisal meetings
- Effective questioning
- Active listening
- Recognising achievements
- Constructive feedback
- Discussing performance gaps
- Managing disagreement
- Difficult appraisal conversations
- Documenting outcomes
- Agreeing on follow-up actions

Practical exercise. Role-play appraisal interviews involving high-performance, satisfactory-performance and underperformance scenarios.

DAY 6 Artificial Intelligence in Performance Management

Participants explore how AI and generative AI can support each stage of the performance management process.

Topics. What the day covers

- Introduction to artificial intelligence and generative AI
- AI applications in HR
- AI-assisted objective and KPI development
- AI-assisted performance analysis
- Competency assessment
- Appraisal preparation
- Performance summaries
- Employee feedback
- Development planning
- Opportunities and limitations of AI
- The relationship between AI assistance and managerial judgement

Practical exercise. Use AI to develop and critically review objectives, KPIs, performance criteria and behavioural indicators.

DAY 7 AI-Assisted Performance Assessment and Analysis

Participants apply AI tools to structured employee-performance information.

Topics. What the day covers

- Preparing performance information for AI analysis
- Structuring performance evidence
- Comparing evidence against predefined criteria
- Analysing performance against KPIs
- Identifying missing evidence
- Identifying performance trends
- Recognising inconsistencies
- Supporting consistent ratings
- Generating structured performance summaries
- Checking AI outputs for accuracy
- Retaining managerial responsibility for final decisions

Practical exercise. Complete an AI-assisted employee performance assessment and compare the AI output with a manager-led assessment.

DAY 8 AI Prompt Engineering for Performance Management

Participants develop effective prompts for use throughout the performance management cycle.

Topics. What the day covers

- Principles of effective prompting
- Structuring prompts
- Providing context and instructions
- Defining assessment criteria
- KPI-analysis prompts
- Performance-review prompts
- Competency-assessment prompts
- Employee-feedback prompts
- Development-plan prompts
- Performance-improvement prompts
- Calibration prompts
- Reviewing AI-generated content
- Refining prompts for improved results

Practical workshop. Participants develop an AI Performance Management Prompt Library for use within their organisation.

DAY 9 Responsible AI, Ethics, Privacy and Governance

Participants examine the governance requirements and risks associated with using AI for employee-related activities.

Topics. What the day covers

- AI bias
- Biased historical information
- Employee confidentiality
- Sensitive employee information
- Data privacy
- Transparency and explainability
- Accuracy and verification
- Appropriate and inappropriate uses of AI
- Human oversight
- Accountability
- Internal AI policies
- Governance controls
- Responsible-use guidelines

Practical workshop. Develop responsible-use guidelines for AI-supported performance management and employee appraisal.

DAY 10 Designing and Implementing an AI-Enabled Performance Management Framework

The final day integrates the knowledge and practical skills developed throughout the programme.

Workflow. End-to-end process designed by participants

- 1 Organisational goals
- 2 Employee objectives
- 3 KPIs & targets
- 4 Performance evidence
- 5 Employee self-assessment
- 6 Manager assessment
- 7 AI-supported analysis
- 8 Evidence & consistency check
- 9 Performance calibration
- 10 Manager review
- 11 Final appraisal
- 12 Employee development plan
- 13 Performance improvement
- 14 Continuous monitoring

Topics. What the day covers

- Reviewing the existing appraisal process
- Identifying AI integration opportunities
- Defining human decision points
- Governance and approval controls
- Responsibilities of HR and managers
- Piloting the framework
- Change management
- Manager and employee communication
- Monitoring effectiveness
- Continuous improvement
- Implementation planning

Capstone workshop. Participants develop an AI-Enabled Performance Management and Employee Appraisal Framework that can be adapted for implementation within their organisation. The programme concludes with the preparation of a 30-, 60- and 90-day implementation roadmap.

APPROACH

Training methodology

The programme uses a highly practical and interactive approach combining instructor-led presentations, facilitated discussions, case studies, individual and group exercises, appraisal role-plays, KPI-development workshops, performance calibration exercises, live AI demonstrations, prompt-building workshops, performance-system reviews, workflow design and implementation planning.

Tailored to your organisation. Where appropriate, the organisation may provide its existing appraisal forms, KPI frameworks, performance criteria and anonymised performance examples before training. These can be incorporated into the practical sessions so that participants apply the learning directly to their organisation’s performance management environment.

DETAILS

Duration, fee and certification

Duration	10 days
Training hours	08:30–16:00 daily
Delivery options	Face-to-face classroom training, live online instructor-led training, or in-house training at the client’s premises
Training fee	USD 2,500.00 per delegate, covering the complete 10-day programme
Certification	Participants who successfully complete the programme receive a BMC Training Certificate of Attendance

OUTCOME

Key takeaways

At the end of the ten days, participants leave with an AI Performance Management Prompt Library, responsible-use guidelines for AI-supported appraisal, an AI-Enabled Performance Management and Employee Appraisal Framework adapted to their organisation, and a 30-, 60- and 90-day implementation roadmap.
